5. Pick-up Option:

Depending upon purchase order quantity, items must be ready for pickup. Participating agencies reserve the right to pick up with their own vehicle any requirement under 2,000 square feet of sod, but will require delivery of any order in excess of 2,000 square feet to be delivered and unloaded by the contractor at one time.

6. Performance:

The sod material delivered under this contract must be of the highest quality and meet all Federal, State, and local laws. All sod installation work must meet the enclosed specifications and be approved by the ordering Co-Op agency. Any sod delivered and/or installed not meeting the specifications outlined in this Invitation to Bid shall be replaced at the discretion of the Co-Op agency.

If any material is damaged or destroyed through the fault of the awarded contractor, the item must be replaced within forty-eight (48) hours at the contractor's expense. The replacement sod must be the same species and size. Failure to adhere to the above requirements may result in the cancellation of the contract.

7. Quality Assurance:

All sod furnished under this ITB shall be of commercial quality grade as specified by the Southern Seed Certification Association, Inc.

Contractor's superintendent shall be well versed in Florida sod material and planting operations. All employees shall be competent and highly skilled in their particular job responsibility in order to properly perform the work. The Contractor is responsible for maintaining the quality of the material on the job throughout the duration of the contract.

Any nursery supplying sod that has represented the quality of the sod as being higher than the actual grade as determined under this section shall remove from the project all sod already delivered. Also, the nursery shall not be allowed to supply any additional sod until written evidence is submitted by the Contractor and confirmed by the Grounds Maintenance departments of the participating Co-Op agencies that all material has been inspected and approved by the State Plant Board as being of the quality as represented.

The Co-Op has the option to inspect the sod fields prior to the awarding of the Bid and any time during the contract period in order to assure that the sod quality meets the Bid specifications. Compliance with all current restrictions is regarded to movement of the sod into or within areas which are outside of quarantine boundaries for the white fringed beetle and the imported fire ant, as issued by the following agencies:

- a. U.S. Department of Agriculture, Animal and Plant Health Inspection Services
- b. Florida Department of Agriculture, Division of Plant Industry

All botanical and common names for sod have been from Hortus Third, 1976 edition. Names of varieties not included therein have been generally derived from names accepted in the landscape industry. Where the local nomenclature of the common name differs, the local nomenclature has been used.

The sod shall be nursery grown, except where specified otherwise, and shall comply with all required inspectors, grading standards, and plant regulations as set forth by the Florida Department of Agriculture.

8. Substitutions:

Substitutions of sod types shall be permitted only upon submission of documented proof that the particular type specified is not obtainable. Substitute shall be submitted for approval by the Grounds and/or Landscape Maintenance departments of the participating Co-Op agencies. The Agencies reserve the right to obtain the sod requested from another source.

9. Guarantee:

The guaranteeing sod shall be construed to mean <u>complete and immediate replacement</u> of sod if it is:

- e. Infestation of <u>any</u> pests and/or bugs (i.e. fringed beetle)

<u>Replacement of sod shall be of the same species as that of the plant to be replaced.</u> The guarantee shall be null and void for sod which is damaged, unhealthy, or dies as a result of Acts of God, limited to hail, freeze and winds which exceed hurricane force; providing the sod was in healthy growing condition prior to these Acts of God.

10. Transportation:

Movement of sod shall comply with all Federal, State and local laws and regulations. Sod shall be transported on vehicles of adequate size.

11. Work Schedule:

Contractor shall guarantee delivery and/or work schedule within **ten (10) calendar days after notification** of each project. <u>If Contractor cannot make sod delivery and/or work schedule within ten (10) calendar</u> <u>days, the Co-Op Agency has the option to obtain sod from the secondary awarded vendor</u>. If the secondary vendor cannot deliver or meet the work schedule with the ten (10) calendar days, then the City/Co-Op reserves the right to contact another vendor who can deliver and/or meet the work Schedule. Depending upon the circumstances, the City/Co-Op may document the deficiency in the permanent file as non-performance. Contractor shall:

- a. Deliver sod on pallets with root system protected from exposure to wind and sun.
- b. Deliver sod in quantities capable of being installed within forty-eight (48) hours of cutting. All installation of sod must be completed within twenty-four (24) hours after delivery to installation site.

The plans should include protection at work site when work is in progress and when operations have been halted (such as during the night). Provisions for the protection of work crew, traffic control personnel, pedestrian and motorists shall be addressed. In all cases, the operation plan for traffic control and protection shall include provisions for the following:

- k. Personnel training
- I. Traffic control and protection devices (see Florida Department of Transportation Manual on Traffic Controls and Safe Practices for Street and Highway Construction, Maintenance, and Utility Operations.

A written plan detailing traffic control and safety protection should, if required by a Co-Op agency, be prepared by the successful Bidder. This plan will be part of the continuing contract requirements.

13. Sod Installation:

Installation shall be in accordance with the guidelines specified by the Southern Seed Certification Association, Inc. and including but not limited to the following:

The sod shall be carefully placed by hand, edge-to-edge, in rows at right angles to the slope, commencing at the base of the area to be sodden and working upward. The sod shall be immediately pressed firmly into contact with sod bed to provide a true and even surface and ensure knitting without displacement of sod or deformation of the surfaces of the sodden areas shall be staggered in a corresponding manner, providing the offset along the edge does not exceed six inches (6"). All vertical edging adjacent to sodden areas shall be tamped as to produce a feather edge. Should Contractor use a roller, they shall coordinate its use as necessary to avoid damage to other work in place.

On slopes having a ratio of one in three or greater, peg the installed sod into place with not less than two stakes per square yard.

Immediately after completing placement of sod, begin water operation. Water shall be applied in the amount necessary to keep the sod moistened to the full depth of the root zone for a period of not less than two (2) weeks.

After the sod has been installed, pallets and other debris created by the Contractor shall be removed from the project. Any paved areas, including curbs and sidewalks which have been strewn with soil, sod waste or fertilizer shall be thoroughly swept.

In the event that weeds or other undesirable vegetation became prevalent to such an extent that either cut or uncut they threaten to smother the grass species, they shall be removed as directed by the Grounds Maintenance Supervisor of the appropriate agency. If necessary, it shall be replaced as needed.

Installation must be in staggered joints, edge to edge, as tight as possible. All sod shall be alive, fresh, uninjured, and free of insects, pests, weeds, disease and Nematodes.

The sod shall be live, fresh, and uninjured at the time of planting. It shall be shaded and kept moist from the time it is cut until it is planted.

This section specifies the furnishing and/or installing of sod. The following contains a specific description of the sods being requested and sod installation specifications:

- Sod must be viable (not dormant) and capable of vigorous growth when planted.
- C. <u>BAHIA ARGENTINE BAHIA GRASS:</u> Commercial quality grade as specified by the Southern Seed Certification Association, Inc. including but not limited to the following:
 - Sod shall be well matted with strong developed roots and be not less than two (2) years old, free of weeds and undesirable native grasses. Sod containing Bermuda grass will not be accepted.

 - Sod must be viable (not dormant) and capable of vigorous growth when planted.
- D. <u>BAHIA PENSACOLA BAHIAGRASS:</u> Pensacola Bahiagrass is the most widely grown bahiagrass today. It has been established on several million acres of roads, lawns, pastures, forage, and conservation lands in the Southern states of USA since its discovery in 1935 by Ed Finlayson of the Escambia County Extension Service, subsequently selected for widespread use in that area.

It has an extensive root system – long, slim (narrow) leaves with a root system that grows to depths of 7-10 feet, which imparts excellent drought tolerance. It also tolerates either hot or cold temperatures as well. It produces an abundance of seedheads, which reduces its desirability for use as a lawn grass but makes it suitable for roadside plantings. It has longer and narrower leaf blades than Argentine.

With more cold-tolerance than other Bahia's, it can be grown further North toward and in the transition zone. Top growth is usually killed by "mild frost" but it recovers fast with warm weather. In colder areas, the Pensacola variety produces more early and late season forage growth than the other Bahia varieties.

It was originally used as a pasture grass on the sandy soils of the southeastern United States, and is popular low maintenance lawngrass for infertile soils that does not require high inputs of fertilizers. Although bahiagrass does not produce a high-quality, dense, dark green lawn like some other warm-season lawngrasses, it does provide a good low maintenance lawn where slightly reduced visual quality is acceptable.

It does not form excessive thatch. It may be grown from seed, which is abundant and relatively cheap, or it may be established from sod, sprigs, of plugs. It has relatively few disease problems, and mole crickets are the only primary insect problem.

- Sod shall be well matted with strong developed roots and be not less than two (2) years old, free of weeds and undesirable native grasses. Sod containing Bermuda grass will not be accepted.
- Machine cut pad size: 12" x 24" x ³/₄" (+ ¹/₄") excluding top growth and thatch. Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
- Sod must be viable (not dormant) and capable of vigorous growth when planted.
- E. <u>CERTIFIED AND UNCERTIFIED BERMUDA (Tifway 419)</u>: As required, sod is to be certified by the Southern Seed Certification Association, Inc. An official labeling certificate is to accompany each shipment of sod.
 - Bermuda sod shall be of premium grade and sand grown. No broadleaf weeds and no more than two percent (2%) of any other grass or weeds. Sod shall possess characteristics upper surface pubescence. Sod shall be well matted with strong developed roots and be not less than two (2) years old.
 - Machine cut pad size: 12" x 24" (except for "Big Roll Bermuda sod" which shall be delivered as harvested 42" wide x 100' long rolls) x ³/₄" (+ ¹/₄") excluding top growth and thatch. Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
 - Sod must be viable (not dormant) and capable of vigorous growth when planted.
- F. <u>CERTIFIED BERMUDA (Tifgreen 328):</u> Sod is to be certified by the Southern Seed Certification Association, Inc. An official labeling certificate is to accompany each shipment of sod.
 - Bermuda sod shall be premium grade and sand grown. No broadleaf weeds and no more than two percent (2%) of any other grass or weeds. Sod shall possess characteristic upper surface pubescence. Sod shall be well matted with strong developed roots and be not less than two (2) years old.
 - Machine cut pad size: 12" x 24" (except for "Big Roll Bermuda sod" which shall be delivered as harvested 42" wide x 100' long rolls) x ³/₄" (+ ¹/₄") excluding top growth and thatch. Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
 - Sod must be viable (not dormant) and capable of vigorous growth when planted.
- G. <u>BERMUDA CELEBRATION:</u> A selected mutation of *Cynodon dactylon*, a hybrid cultivar of Bermuda, chosen specifically for its dark blue-green color, low growing habit, adaptability to light-moderate shade, excellent drought tolerance and ability to reduce production costs while demonstrating desirable growth characteristics.  - Sod must be viable (not dormant) and capable of vigorous growth when planted.
- I. <u>PASPALUM SEA DWARF:</u> SeaDwarf[™] Seashore Paspalum is the only dwarf of Seashore Paspalum. It is a warm-season turfgrass with a fine texture. SeaDwarf has a green color and tolerates a wide range of mowing heights, about 1/8" to about 1". It can be irrigated with low quality water. Potable, effluent, reclaimed, even seawater under the right conditions can be used as an irrigation source. Commercial quality grade as specified by the Southern Seed Certification Association, Inc. including but not limited to the following:
 - Sod shall be well matted with strong developed roots and be not less than two (2) years old, free of weeds and undesirable native grasses. Sod containing Bermuda grass will not be accepted.
 - Machine cut pad size: 12" x 24" x ¾" (+ ¼") excluding top growth and thatch. Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
 - Sod must be viable (not dormant) and capable of vigorous growth when planted.
- J. <u>SEAISLE SUPREME SEASHORE PASPALUM CERTIFIED:</u> Sealsle Supreme is a new and improved semi-dwarf seashore paspalum cultivar developed at the University of Georgia for tees, greens, fairways and roughs. Like predecessors Sealsle 1 and Sealsle 2000, Sealsle Supreme requires less nitrogen, fertilization and less water than many other warm season cultivars. More importantly, Supreme has a higher inherent salinity tolerance level than the other paspalums available today. It is a grass that thrives on salt water. In fact, it can tolerate extremely poor alternate water sources including sea water-fresh water blends with proper management practices. It also grows quite well when watered from recycled or effluent sources.
 - Sod shall be well matted with strong developed roots and be not less than two (2) years old, free of weeds and undesirable native grasses. Sod containing Bermuda grass will not be accepted.
 - Machine cut pad size: 12" x 24" x ³/₄" (+ ¹/₄") excluding top growth and thatch. Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
 - Sod must be viable (not dormant) and capable of vigorous growth when planted.

Sealsle Supreme is being hailed as the ideal wall-to-wall turfgrass solution for golf courses around the world, with the following characteristics:

- Excellent Salt Tolerance Can be irrigated with brackish water with proper management.
- Tolerates gray water and effluent.
- Handles wide range of soil pH levels: 4.0-9.8
- > High tolerance to salt spray, water logging and periodic inundations.
- Low fertilization requirements
- Minimal pesticide requirements
- Good rooting in sandy, clay or muck-type soils.
- > Darker green color than Bermuda grass.
- Can be overseeded with Bentgrass-Ryegrass-Alkaligrass Blends.
- > Excellent low light intensity tolerance (cloudy, foggy, smoggy) conditions.
- Root growth and functionality still maintained in 40-55 ¼ soil temperature range.
- Low tree shade tolerance (similar to Bermuda).
- K. <u>ULTIMATE FLORA® ZOYSIA:</u> Ultimate Flora® Zoysia, a variety of Zoysia japonica, was developed in Florida by researchers at the University of Florida. This grass is a patented product of the University of Florida Turf Program. It was selected and bred for darker leaf color, fewer seed heads, a more refined leaf structure and, depending on location, faster growth rate than the long-standing Meyer zoysia grass. Ultimate Flora® Zoysia is well suited for use in parks and common areas in warm-season climates. Growers of Ultimate Flora® Zoysia shall be licensed by Environmental Turf, Inc.
 - Sod pieces shall be 16" x 24" x ½" excluding top growth and thatch. Must be free of weeds or other grasses. Sod shall be well matted with strong developed roots and be not less than six (6) months old.
 - Each pallet shall contain a minimum of 400 square feet and be cut within twenty-four (24) hours prior to delivery.
 - Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
 - Sod must be viable (not dormant) and capable of vigorous growth when planted.
 - Sod containing Bermuda grass will not be accepted.
- L. <u>HAMMOCK® CENTIPEDE:</u> Hammock® Centipede is a patented product of the University of Florida Turf Program. It is more heat tolerant than other Centipede cultivars. It was bred in South Florida and developed for use as a lawn that can stand up to the summer heat. Low-maintenance features make it highly attractive. Once established, it will need to be mowed less than six (6) times per year. It is suitable for roadways, medians and public common area lawns. Probably not suitable for high-traffic areas. Finer texture than St. Augustine grasses. Darker green color than many existing varieties of Centipede. Growers of Hammock Centipede shall be licensed by Environmental Turf, Inc.
 - Sod pieces shall be 16" x 24" x ¼" excluding top growth and thatch. Must be free of weeds and other grasses. Sod shall be well matted with strong developed roots and be not less than six (6) months old.
 - Each pallet shall contain a minimum of 400 square feet and be cut within twenty-four (24) hours prior to delivery.
 - Must be mowed two (2) days prior to cut and able to remain intact when suspended vertically with a firm grasp on upper 10% of pad.
 - Sod must be viable (not dormant) and capable of vigorous growth when planted.

- > Sod containing Bermuda grass will not be accepted.
- M. <u>WILDFLOWER SOD</u>: Wildflower sod is a lush mat of wildflower plants with these flowers in sod form. The sod is easily laid in place and is a popular alternative to a manicured garden, as they are low maintenance requiring little water and reduce mowing frequency once established. Unlike popular belief, wildflowers are difficult to germinate from seed (most have a germination rate of 50% to 70%). Wildflower sod is the perfect answer because over ³/₄ of the seeds are already germinated and grown approximately 3-6 inches.
 - Wildflower sod shall be furnished in using the same machine cut pad size: 12" x 24" x ³/₄" (+ ¹/₄").
 - The sod pads shall be composed of densely packed, at least 75mm tall approx. 3 inches – perennial wildflower plants with well developed root systems.
 - Plants shall be mature enough to bloom within six (6) to eight (8) weeks after planting.
 - The Wildflower sod shall contain a minimum of 4-5 varieties of hardy, native, perennial plants, and all must contain plants compatible with both Zone 10 and Zone 11.
 - Sod shall contain a mix of native wildflowers within a sod form to include but not limited to:
 - Coreopsis Verticillata
 - Coreopsis Grandiflora
 - Coreopsis Tinctoria
 - Gaillardia Pulchella
 - Dune Sunflower
 - Coneflower
